HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Algebraic properties of copulas defined from matrices

Cécile Amblard^{*}, Stéphane Girard, Ludovic Mennetau

We propose a new family of copulas, defined by:

$$S_\phi(u, v) = {}^t\phi(u)A\phi(v), \quad (u, v) \in [0, 1]^2,$$

where ϕ is a function from $[0, 1]$ to \mathbb{R}^p and A is a $p \times p$ matrix. Let us remark that if $p = 2$ and A is a diagonal matrix, then S_ϕ reduces to the family proposed in [1]. As a consequence, S_ϕ can be seen as an extension of this former family to arbitrary matrices.

First, we shall give sufficient conditions on A and ϕ to obtain copulas. Then, we shall establish the dependence and symmetry properties of this family of copulas. Finally, we shall study the stability properties of S_ϕ with respect to the operator $*$ (presented for instance in [2], p. 194) as well as other algebraic properties.
