HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

IFIP – The International Federation for Information Processing

IFIP was founded in 1960 under the auspices of UNESCO, following the First World Computer Congress held in Paris the previous year. An umbrella organization for societies working in information processing, IFIP's aim is two-fold: to support information processing within its member countries and to encourage technology transfer to developing nations. As its mission statement clearly states,

IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of information technology for the benefit of all people.

IFIP is a non-profitmaking organization, run almost solely by 2500 volunteers. It operates through a number of technical committees, which organize events and publications. IFIP's events range from an international congress to local seminars, but the most important are:

- The IFIP World Computer Congress, held every second year;
- Open conferences;
- Working conferences.

The flagship event is the IFIP World Computer Congress, at which both invited and contributed papers are presented. Contributed papers are rigorously refereed and the rejection rate is high.

As with the Congress, participation in the open conferences is open to all and papers may be invited or submitted. Again, submitted papers are stringently refereed.

The working conferences are structured differently. They are usually run by a working group and attendance is small and by invitation only. Their purpose is to create an atmosphere conducive to innovation and development. Refereeing is less rigorous and papers are subjected to extensive group discussion.

Publications arising from IFIP events vary. The papers presented at the IFIP World Computer Congress and at open conferences are published as conference proceedings, while the results of the working conferences are often published as collections of selected and edited papers.

Any national society whose primary activity is in information may apply to become a full member of IFIP, although full membership is restricted to one society per country. Full members are entitled to vote at the annual General Assembly. National societies preferring a less committed involvement may apply for associate or corresponding membership. Associate members enjoy the same benefits as full members, but without voting rights. Corresponding members are not represented in IFIP bodies. Affiliated membership is open to non-national societies, and individual and honorary membership schemes are also offered.

IFIP World Computer Congress 2010 (WCC 2010)

Message from the Chairs

Every two years, the International Federation for Information Processing (IFIP) hosts a major event which showcases the scientific endeavors of its over one hundred technical committees and working groups. On the occasion of IFIP's 50th anniversary, 2010 saw the 21st IFIP World Computer Congress (WCC 2010) take place in Australia for the third time, at the Brisbane Convention and Exhibition Centre, Brisbane, Queensland, September 20–23, 2010.

The congress was hosted by the Australian Computer Society, ACS. It was run as a federation of co-located conferences offered by the different IFIP technical committees, working groups and special interest groups, under the coordination of the International Program Committee.

The event was larger than ever before, consisting of 17 parallel conferences, focusing on topics ranging from artificial intelligence to entertainment computing, human choice and computers, security, networks of the future and theoretical computer science. The conference History of Computing was a valuable contribution to IFIP's 50th anniversary, as it specifically addressed IT developments during those years. The conference e-Health was organized jointly with the International Medical Informatics Association (IMIA), which evolved from IFIP Technical Committee TC-4 "Medical Informatics".

Some of these were established conferences that run at regular intervals, e.g., annually, and some represented new, groundbreaking areas of computing. Each conference had a call for papers, an International Program Committee of experts and a thorough peer reviewing process of full papers. The congress received 642 papers for the 17 conferences, and selected 319 from those, representing an acceptance rate of 49.69% (averaged over all conferences). To support interoperability between events, conferences were grouped into 8 areas: Deliver IT, Govern IT, Learn IT, Play IT, Sustain IT, Treat IT, Trust IT, and Value IT.

This volume is one of 13 volumes associated with the 17 scientific conferences. Each volume covers a specific topic and separately or together they form a valuable record of the state of computing research in the world in 2010. Each volume was prepared for publication in the Springer IFIP Advances in Information and Communication Technology series by the conference's volume editors. The overall Publications Chair for all volumes published for this congress is Mike Hinchey.

For full details of the World Computer Congress, please refer to the webpage at <http://www.ifip.org>.

Preface

This volume contains the proceedings of two conferences held as part of the 21st IFIP World Computer Congress in Brisbane, Australia, 20–23 September 2010.

The first part of the book presents the proceedings of DIPES 2010, the 7th IFIP Conference on Distributed and Parallel Embedded Systems. The conference, introduced in a separate preface by the Chairs, covers a range of topics from specification and design of embedded systems through to dependability and fault tolerance.

The second part of the book contains the proceedings of BICC 2010, the 3rd IFIP Conference on Biologically-Inspired Collaborative Computing. The conference is concerned with emerging techniques from research areas such as organic computing, autonomic computing and self-adaptive systems, where inspiration for techniques derives from exhibited behaviour in nature and biology. Such techniques require the use of research developed by the DIPES community in supporting collaboration over multiple systems.

We hope that the combination of the two proceedings will add value for the reader and advance our related work.

Table of Contents

Distributed and Parallel Embedded Systems (DIPES 2010)	1
Preface	3
<i>Marilyn Wolf, Bernd Kleinjohann, and Lisa Kleinjohann</i>	
Opening and Keynote	
Safety, Efficiency and Autonomy - Mastering Conflicting Trends in Embedded Systems Design	5
<i>Rolf Ernst</i>	
Specification and Modeling	
Rialto 2.0: A Language for Heterogeneous Computations	7
<i>Johan Lilius, Andreas Dahlin, and Lionel Morel</i>	
Scenario-Based Modeling in Industrial Information Systems	19
<i>Ricardo J. Machado, João M. Fernandes, João P. Barros, and Luís Gomes</i>	
An Entirely Model-Based Framework for Hardware Design and Simulation	31
<i>Safouan Taha, Ansgar Radermacher, and Sébastien Gérard</i>	
Extending the Standard Execution Model of UML for Real-Time Systems	43
<i>Abderraouf Benyahia, Arnaud Cuccuru, Safouan Taha, François Terrier, Frédéric Boulanger, and Sébastien Gérard</i>	
Fault Tolerance	
Task Migration for Fault-Tolerant FlexRay Networks	55
<i>Kay Klobedanz, Gilles B. Defo, Henning Zabel, Wolfgang Mueller, and Yuan Zhi</i>	
Flexible and Dynamic Replication Control for Interdependent Distributed Real-Time Embedded Systems	66
<i>Luís Nogueira, Luís Miguel Pinho, and Jorge Coelho</i>	

Verification and Validation

Generation of Executable Testbenches from Natural Language Requirement Specifications for Embedded Real-Time Systems	78
<i>Wolfgang Mueller, Alexander Bol, Alexander Krupp, and Ola Lundkvist</i>	
Model Checking of Concurrent Algorithms: From Java to C	90
<i>Cyrille Artho, Masami Hagiya, Watcharin Leungwattanakit, Yoshinori Tanabe, and Mitsuharu Yamamoto</i>	
Integrate Online Model Checking into Distributed Reconfigurable System on Chip with Adaptable OS Services	102
<i>Sufyan Samara, Yuhong Zhao, and Franz J. Rammig</i>	
Efficient Mutation-Analysis Coverage for Constrained Random Verification	114
<i>Tao Xie, Wolfgang Mueller, and Florian Letombe</i>	

Code-Generation, Simulation and Timing Analysis

Generating VHDL Source Code from UML Models of Embedded Systems	125
<i>Tomás G. Moreira, Marco A. Wehrmeister, Carlos E. Pereira, Jean-François Pétin, and Eric Levrat</i>	
RACE: A Rapid, Architectural Simulation and Synthesis Framework for Embedded Processors	137
<i>Roshan Ragel, Angelo Ambrose, Jorgen Peddersen, and Sri Parameswaran</i>	
A Mixed Level Simulation Environment for Stepwise RTOS Software Refinement	145
<i>Markus Becker, Henning Zabel, and Wolfgang Mueller</i>	
Global Best-Case Response Time for Improving the Worst-Case Response Times in Distributed Real-Time Systems	157
<i>Steffen Kollmann, Victor Pollex, and Frank Slomka</i>	

Distributed Architectures and Design Support

Dependency-Driven Distribution of Synchronous Programs	169
<i>Daniel Baudisch, Jens Brandt, and Klaus Schneider</i>	
Distributed Resource-Aware Scheduling for Multi-core Architectures with SystemC	181
<i>Philipp A. Hartmann, Kim Grüttner, Achim Rettberg, and Ina Podolski</i>	

Robust Partitioned Scheduling for Real-Time Multiprocessor Systems	193
<i>Frédéric Fauberteau, Serge Midonnet, and Laurent George</i>	
An Infrastructure for Flexible Runtime Reconfigurable Multi-microcontroller Systems	205
<i>Claudius Stern, Philipp Adelt, Matthias Schmitz, Lisa Kleinjohann, and Bernd Kleinjohann</i>	
Biologically-Inspired Collaborative Computing (BICC 2010)	217
Preface	219
<i>Peter Lindsay, Franz J. Rammig, Mike Hinchey, and Jon Timmis</i>	
Ants and Adaptive Systems	
Model Checking the Ant Colony Optimisation	221
<i>Lucio Mauro Duarte, Luciana Foss, Flávio Rech Wagner, and Tales Heimfarth</i>	
Feature Selection for Classification Using an Ant System Approach	233
<i>Nadia Abd-Alsabour</i>	
Novelty-Aware Attack Recognition – Intrusion Detection with Organic Computing Techniques	242
<i>Dominik Fisch, Ferdinand Kastl, and Bernhard Sick</i>	
Evolutionary-Computation Based Risk Assessment of Aircraft Landing Sequencing Algorithms	254
<i>Wenjing Zhao, Jiangjun Tang, Sameer Alam, Axel Bender, and Hussein A. Abbass</i>	
Learning Classifier Systems and Collaborative Systems	
A Collaborative Decision Support Model for Marine Safety and Security Operations	266
<i>Uwe Glässer, Piper Jackson, Ali Khalili Araghi, Hans Wehn, and Hamed Yaghoubi Shahir</i>	
Combining Software and Hardware LCS for Lightweight On-Chip Learning	278
<i>Andreas Bernauer, Johannes Zeppenfeld, Oliver Bringmann, Andreas Herkersdorf, and Wolfgang Rosenstiel</i>	
Collaborating and Learning Predators on a Pursuit Scenario	290
<i>Nugroho Fredivianus, Urban Richter, and Hartmut Schmeck</i>	

SelSta - A Biologically Inspired Approach for Self-Stabilizing Humanoid Robot Walking	302
<i>Bojan Jakimovski, Michael Kotke, Martin Hörenz, and Erik Maehle</i>	
Author Index	315

Distributed and Parallel Embedded Systems (DIPES 2010)

Preface

IFIP Working Group 10.2 was pleased to sponsor DIPES 2010, the IFIP Conference on Distributed and Parallel Embedded Systems. The conference was held in Brisbane, Australia during September 20-22, 2010 as part of the IFIP World Computer Conference.

Already when establishing this conference series in 1998, the idea of distribution, where the control task is carried out by a number of controllers distributed over the entire system and connected by some interconnect network, was emphasized in its title. This idea naturally leads to the recent research field of cyber physical systems where embedded systems are no longer seen as “closed boxes” that do not expose the computing capability to the outside. Instead networked embedded systems interact with physical processes in a feedback loop leading to ever more “intelligent” applications with increased adaptability, autonomy, efficiency, functionality, reliability, safety, and usability. Examples like collision avoidance, nano-tolerance manufacturing, autonomous systems for search and rescue, zero-net energy buildings, assistive technologies and ubiquitous health-care cover a wide range of domains influencing nearly all parts of our lives.

Hence, the design of distributed embedded systems interacting with physical processes is becoming ever more challenging and more than ever needs the interdisciplinary research of designers and researchers from industry and academia. DIPES provides an excellent forum for discussing recent research activities and results.

DIPES 2010 received 37 submissions: 30 from Europe, 4 from South America, 2 from Asia/Australia, and 1 from Africa. From these submissions, the Program Committee accepted 18 papers for presentation at the conference. The contributions present advanced design methods for distributed embedded systems, starting from specification and modelling over verification and validation to scheduling, partitioning and code generation, also targeting specific architectures such as upcoming multi-core systems or reconfigurable systems.

We would like to thank all authors for their submitted papers and the Program Committee for their careful reviews. Our thanks also go to Rolf Ernst for his inspiring keynote speech on mastering the conflicting trends safety, efficiency and autonomy in embedded systems design. We gratefully acknowledge the superb organization of this event by the WCC Committee. Furthermore, we also thank our colleague Claudius Stern for his valuable support in preparing the camera-ready material for this book.
