Submitted on 6 Dec 2022

**HAL** is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

# Exploiting brain critical dynamics to inform Brain-Computer Interfaces performance

# Brain-Computer Interface (BCI) – behind the magic...

2

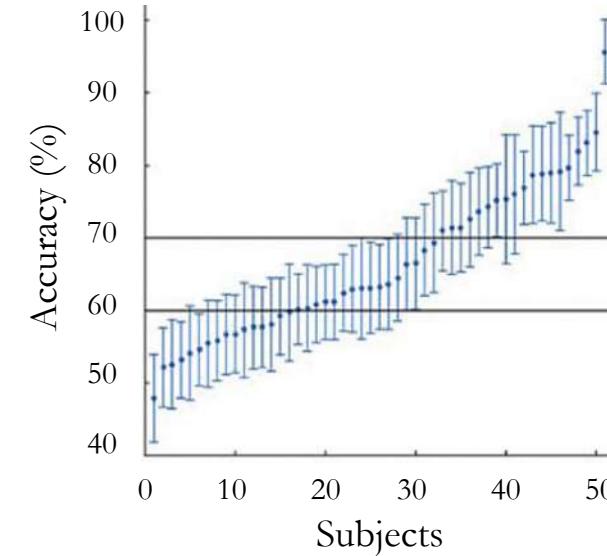

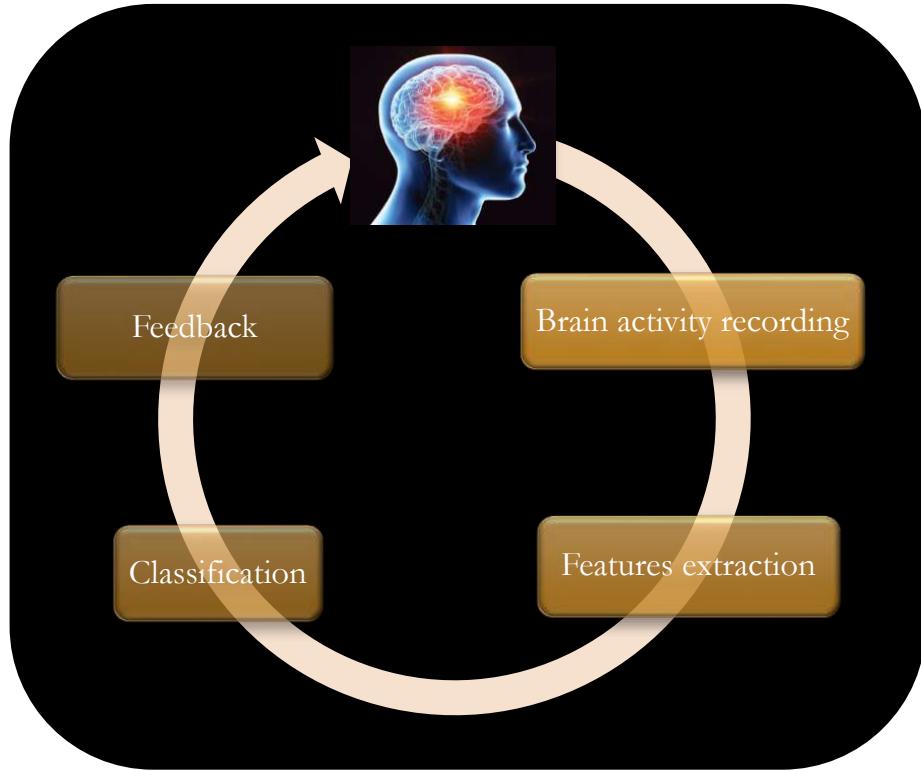

BCI framework

Adapted from (Lotte et al, 2015)

# Brain-Computer Interface (BCI) – current challenges

3

Adapted from (Ahn & Jun, 2015)

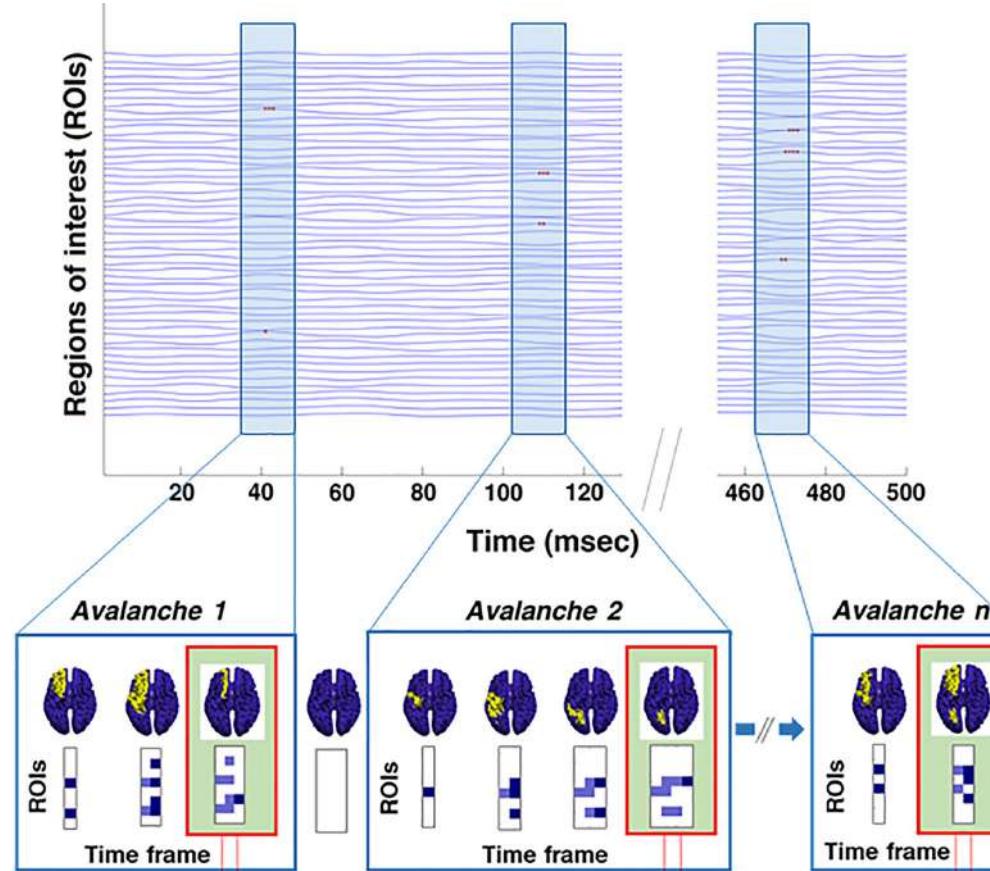

## Problem:

Current BCIs fail to detect the mental intentions in ~30% of users – **BCI inefficiency** (Thompson, 2018)  
⇒ Rely on local measurements of the brain activity

# Capturing fast, non-linear brain dynamics

4

Neuronal avalanches: bursts of enhanced activity observed across neuroimaging modalities

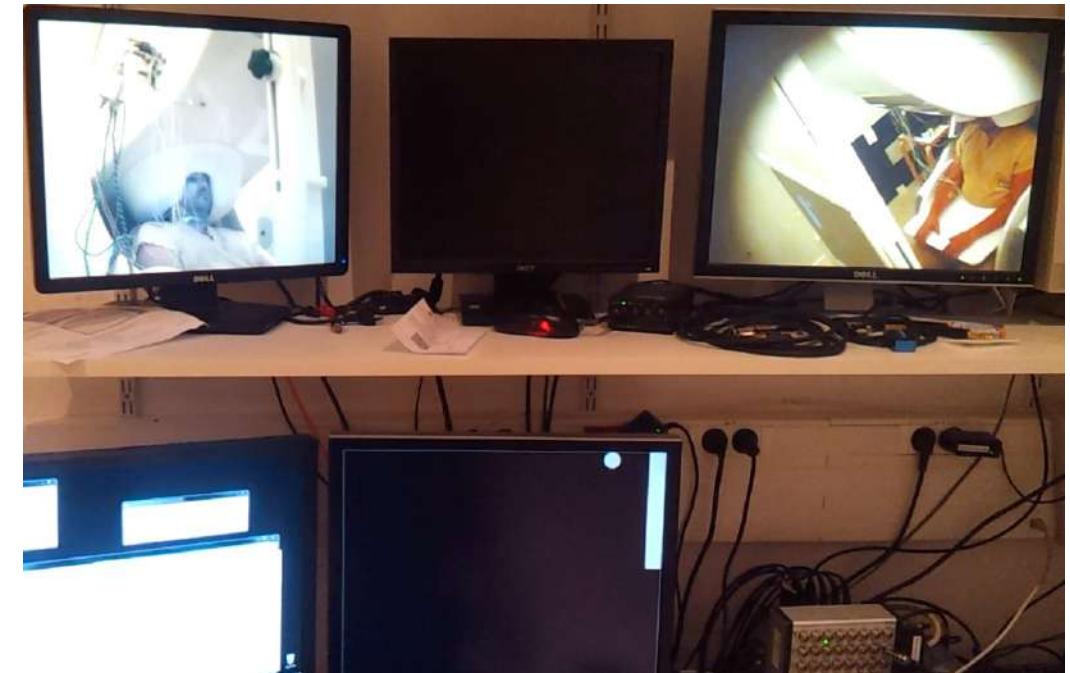

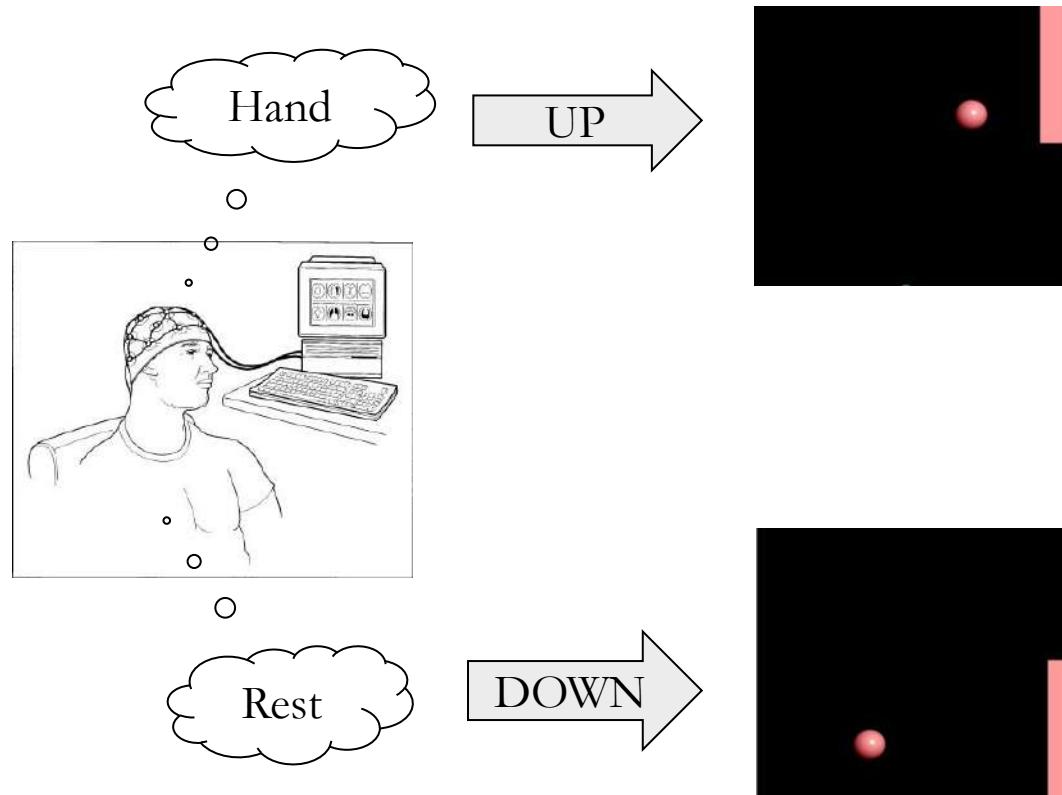

Adapted from [Polverino et al, Neurology, 2022]

## Hypothesis:

The neuronal avalanches could spread differently according to the task & provide original markers of BCI performance.

# BCI experiment

5

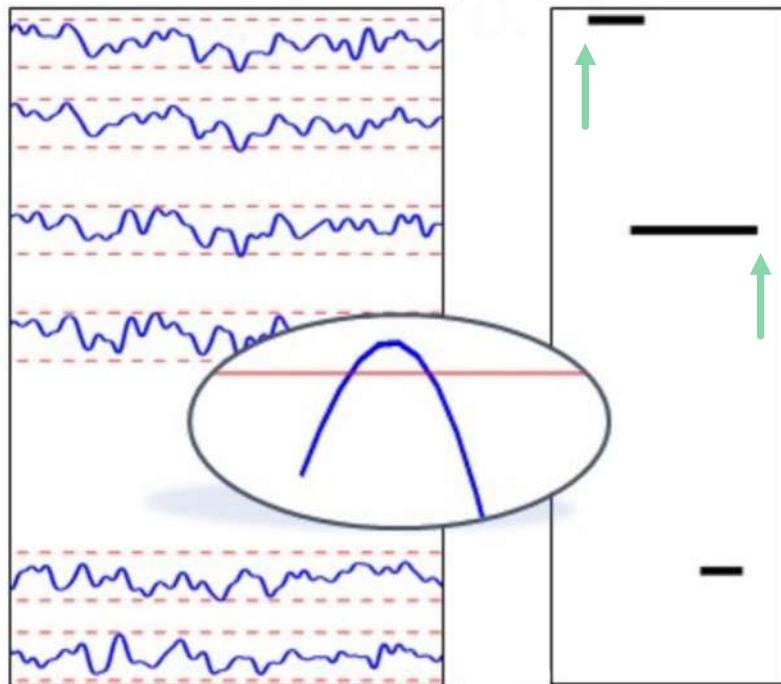

For a complete description of the protocol and the dataset, please refer to [Corsi et al, NeuroImage, 2020]

## Objective:

Tracking the dynamical features related to motor imagery as compared to rest

# Differences in transition probabilities discriminate mental states

6

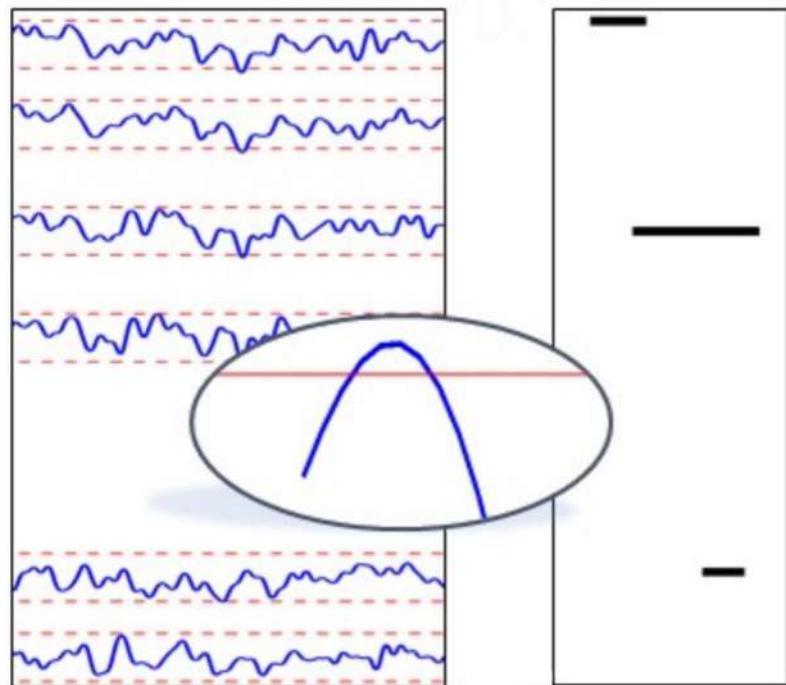

Adapted from [Sorrentino et al, eLife, 2021]

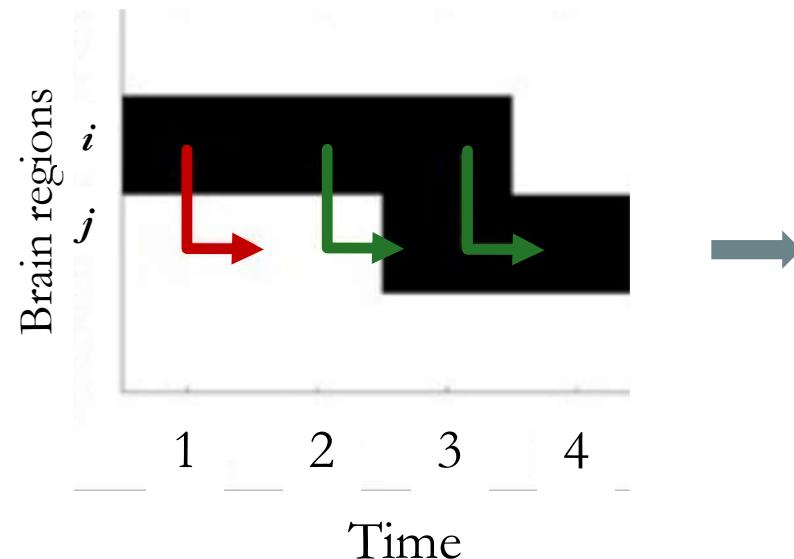

## Differences in transition probabilities discriminate mental states

7

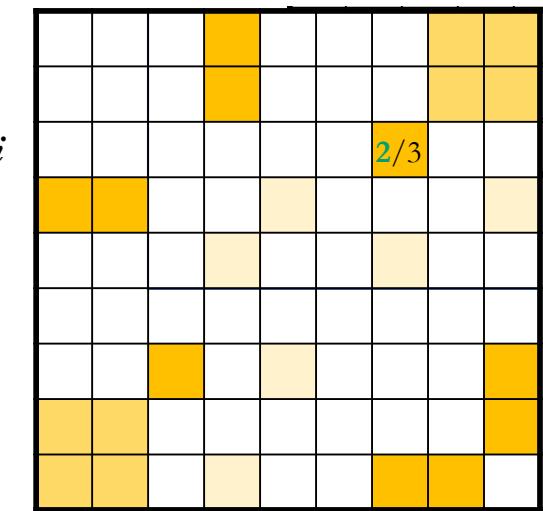

## Neuronal avalanche

# Avalanche Transition Matrix

(ATM)

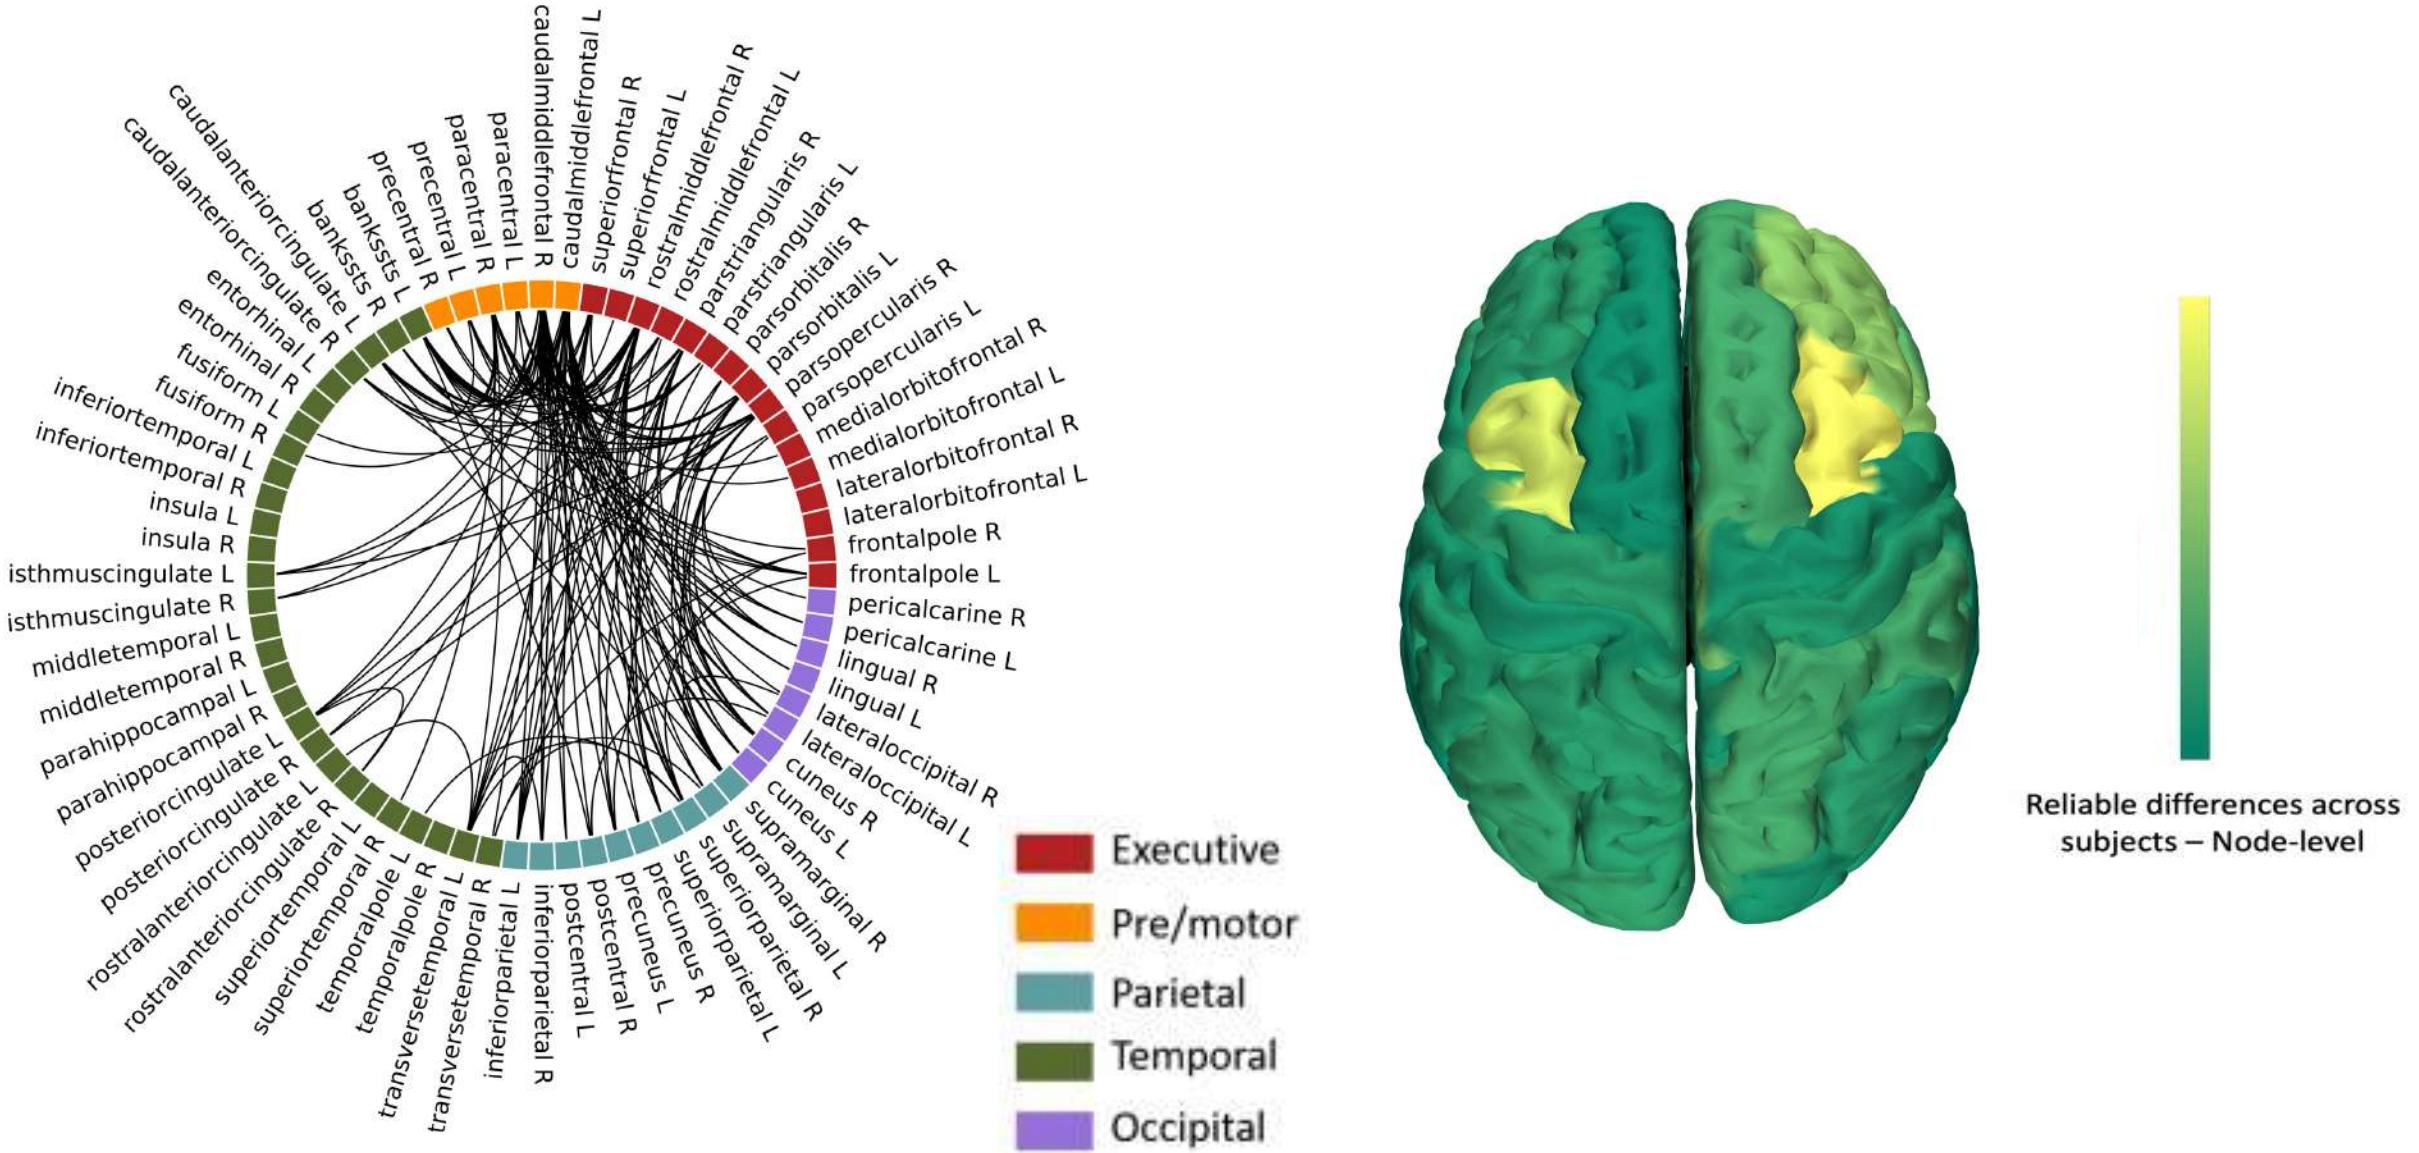

Adapted from [Sorrentino et al, eLife, 2021]

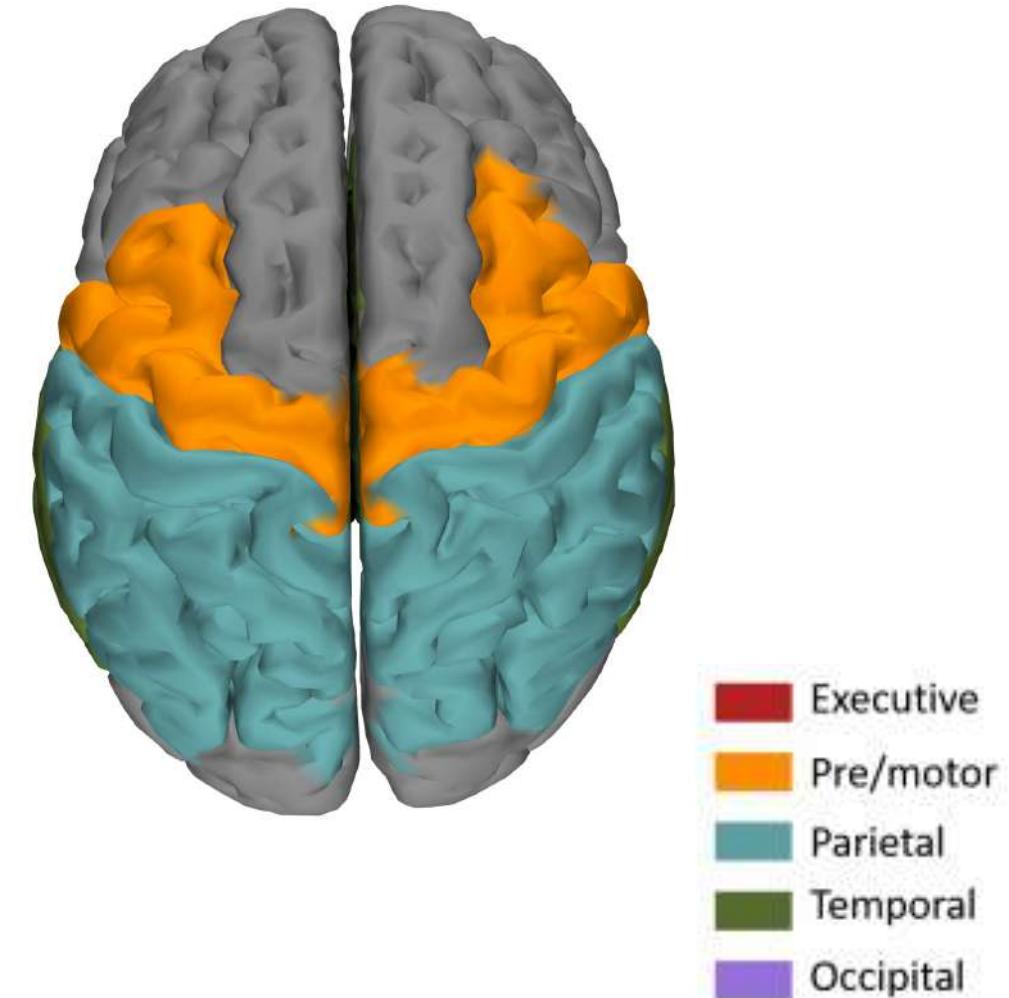

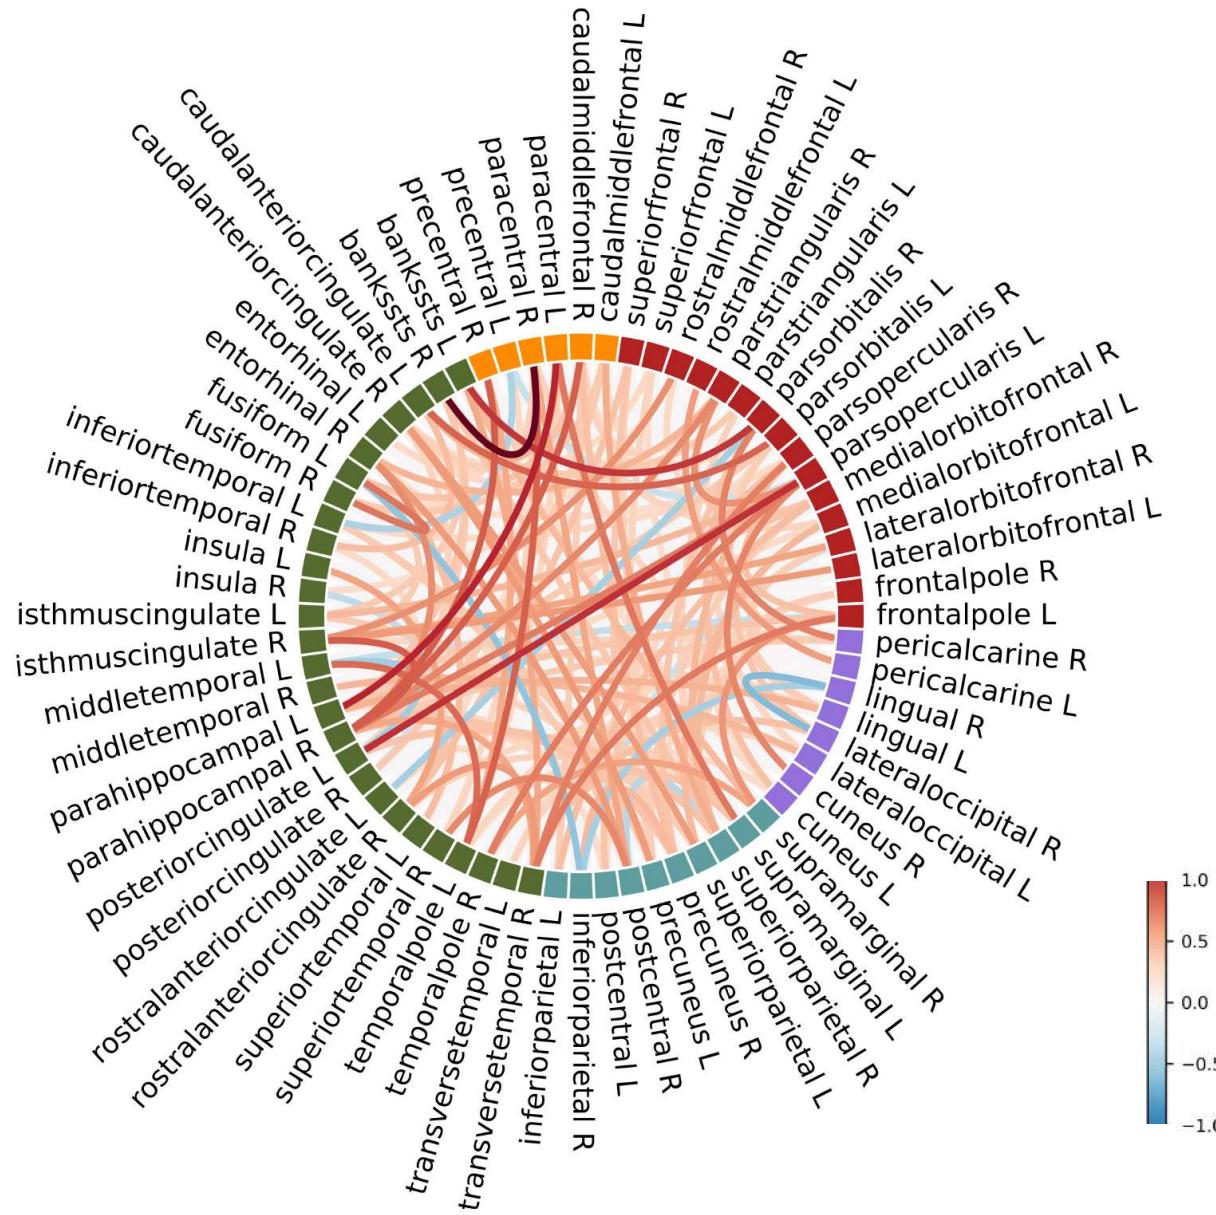

# Differences in transition probabilities discriminate mental states

8

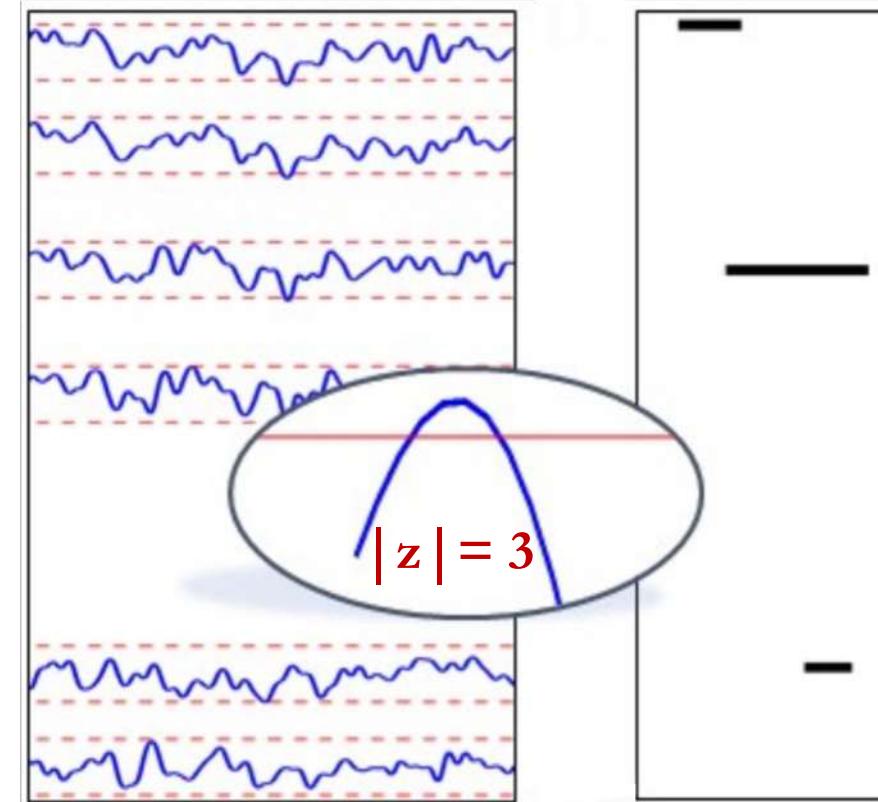

## Differences in transition probabilities relate to BCI scores

Reliable functional information of task performance retrieval

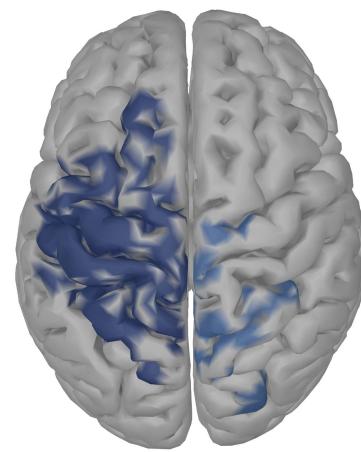

- Meaningful information communication among regions on the large-scale & aperiodic and scale-free perturbation

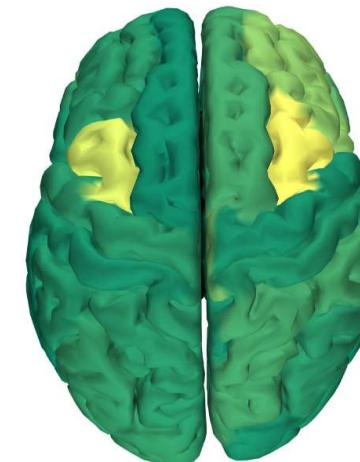

⇒ Focusing on higher-order perturbations to capture functionally-relevant processes & reliable information

Reliable functional information of task performance retrieval

- Meaningful information communication among regions on the large-scale & aperiodic and scale-free perturbation
- Building innovative BCI protocols

Power spectra  
significant at **group** level

Neuronal avalanches  
significant at **individual** level

⇒ Tracking changes in perturbation spreading while performing different tasks via the avalanches transition matrices

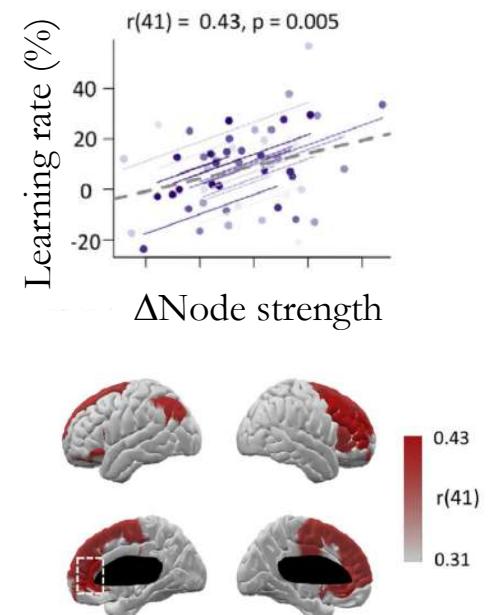

## Reliable functional information of task performance retrieval

- Meaningful information communication among regions on the large-scale & aperiodic and scale-free perturbation
- Building innovative BCI protocols

## Markers of BCI performance

- Current predictors of BCI
  - Local measurements – power spectra (Ahn et al, 2015)
  - Time-averaged interactions (Sugata et al, 2014)
  - Brain networks metrics [Corsi et al, NeuroImage 2020; Corsi et al, JNE 2021]
- Spreading of neuronal avalanches
  - Patterns behaviorally meaningful (Chialvo et al, 2010)
  - Computational fast marker

} Replicability?  
} Online implementation?
